

HOWCLEAN - OUR STORY

HOWCLEAN, ECO-FRIENDLY AND 100% NATURAL SANITISING PRODUCT DEVELOPED BY FRIENDS WITH SOME SPARE TIME ON THEIR HANDS DURING THE COVID-19 PANDEMIC

We are a Buckinghamshire based manufacturer of a safe, affordable, sanitiser called HOWCLEAN.

With the recent challenges of the Covid-19 pandemic, and from personal experience in trying to source a non-alcohol, non-sting hand sanitiser for our own families and children, we stumbled across a chemical known as HOCL.

HOCL is a powerful, proven, natural sanitiser that kills 99% of bacteria and viruses, is child and pet safe and does not contain alcohol or other harmful chemicals like similar sanitising products.

We believe the health hazards are as low as reasonably possible because our product is safe if ingested, not harmful to children, animals, the skin or eyes and, because it can be disposed of in the usual ways, it poses no danger to aquatic life.

HOCL is less toxic to mammals than other conventional disinfectants and can be used on cuts and grazes. Our product conforms to certification BS EN1276:2019, BS EN1275:2005 and BS EN1040:2005.

HOCL is the scientific formula for hypochlorous acid, a weak acid similar to a mild citrus juice.

It is a substance naturally produced in the white blood cells of all mammals for healing and protection.

HOWCLEAN can also be used on hard or soft surfaces, in sanitising tunnels and sprays, and takes less than a minute to take effect.

HOWCLEAN
safe disinfecting for everyone
